

brava![®] enterprise

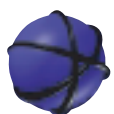

A Perfect Fit For Your Enterprise Viewing Strategy.

Brava![®] Enterprise—the online visualization and collaboration software from Informative Graphics[®]—offers an unbeatable combination of speed, scalability and usability for viewing, annotating and publishing nearly any file format, including office, design engineering (CAD), and image files. Add persistent document security through Informative Graphics' innovative Content Sealed Format (CSF) with Visual Rights[™] publishing controls, including unique features like Redaction (the ability to block areas from view, search, copy, and print) and markup burn-in.

As the software of choice for commercial online project sites, Brava Enterprise raises the standard for online, web-served enterprise publishing and visualization. Brava Enterprise:

- Reduces per-seat software capital and maintenance costs
- Improves critical downstream project communication
- Shortens product time-to-market cycles
- Eliminates communication errors

Out-of-the-box integrations
available to major ECM systems,
including Documentum, Open
Text, and Microsoft

Brava Is Secure Online Viewing

Brava Enterprise allows you to view a variety of formats easily, using only your web browser. Because it is web-based, you have less software to buy, install, and maintain. Because it is so intuitive and easy to use, no training is required. Brava Enterprise simply allows users to view relevant files, regardless of their technical expertise or physical location. And Brava Enterprise is available in Java and ActiveX versions.

- **View Files Securely.** Brava Enterprise has a full range of viewing tools, designed to help you get the information you need quickly. Create and view the new Content Secure Format (CSF), which incorporates password protection, file expiration dates, print/markup/measurement restrictions, and more. You can even hide document areas from view and search with our new Redaction tool. Brava Enterprise never requires access to the original file, leaving it secure and untouched.
- **Markup and Collaborate Efficiently.** Markups are saved in a separate, overlaid XML file, so the original file is never modified. Save markup files as DXF, burn them into the intermediate file, or sort them by filename, author, or date. Our exclusive Changemarks® review feature ensures no comments are missed and all markups are compatible with our MYRIAD desktop product.
- **Best-of-the-Best.** Still the number one choice of commercial project management sites, Brava Enterprise is simply the best web-based view and markup technology available anywhere. It's designed as a powerful, versatile and cost effective content visualization system that can be fully integrated into your custom Web solution. What's more, Brava comes as an out-of-the-box integration to top ECM systems, including Documentum, Open Text, and Microsoft.

Features

Brava Version 5

Viewing

- Zoom/Pan/Rotate
- Redaction (hide document areas)
- Real time zooming
- Magnifier for eye glass/bird's eye views
- CAD layer selection
- XRef/Reference file support
- Monochrome/Color toggle
- Hyperlink to other documents
- Text Search and copy to clipboard
- True color support

Review/Markup

- Markup burn-in
- Adjustable line style and width
- Markup overlay for review
- Author name/date/time stamps
- Save as DXF
- Changemarks® next button review
- Undo/Redo
- Cut and paste
- Markup Exists indicator

Measurement

- Measurement takeoff counts
- Auto-scaled calibration
- Line, rectangle, and polygon/area measurements
- Snap to drawing surfaces
- Precision control

Supported Formats

Over 150 CAD, image and document formats, including PDF, and 45 EDA\ECAD\PCB formats

Print

- Configurable ISO banners and watermark
- Honors redaction areas
- Print to scale (US Customary/Metric)
- AutoCAD line weight support
- Thumbnail print preview
